# Incident Response Report - Phishing Attack

## 1. Executive Summary

A phishing attack was detected targeting organizational users via a malicious email containing a deceptive login link. The attack aimed to steal user credentials. The incident was identified through SIEM alerts and investigated promptly. Immediate actions were taken to isolate affected systems and prevent further compromise.

---

## 2. Timeline

| Time | Event |
|---|---|
| 14:00 | Phishing email detected |
| 14:10 | Alert generated in SIEM |
| 14:20 | User reported suspicious email |
| 14:30 | Endpoint isolated |
| 15:00 | Investigation started |
| 16:00 | Threat contained |

---

## 3. Impact Analysis

- Number of affected users: 2
- Systems impacted: 1 workstation
- Data compromised: No confirmed data exfiltration
- Risk Level: Medium

---

## 4. Remediation Steps

- Blocked malicious email sender
- Removed phishing email from all inboxes
- Isolated infected endpoint
- Reset user credentials
- Updated email security filters

---

## 5. Lessons Learned

- Users need better phishing awareness training
- Email filtering rules must be improved
- Faster alert escalation is required

---

- Regular security drills should be conducted

---

## 6. Investigation Log

| Timestamp | Action |
|---|---|
| 2025-08-18 14:00:00 | Alert received |
| 2025-08-18 14:10:00 | Email analyzed |
| 2025-08-18 14:20:00 | User contacted |
| 2025-08-18 14:30:00 | Endpoint isolated |
| 2025-08-18 14:45:00 | Logs collected |
| 2025-08-18 15:00:00 | Threat confirmed |
| 2025-08-18 15:30:00 | Remediation started |

---

## 7. Phishing Investigation Checklist

- [✓] Confirm email headers
- [✓] Analyze sender email address
- [✓] Check link reputation (VirusTotal)
- [✓] Verify attachments
- [✓] Identify affected users
- [✓] Scan endpoint for malware
- [✓] Reset compromised credentials
- [✓] Block malicious domain/IP

---

## 8. Post-Mortem Summary (50 Words)

The simulated phishing incident exposed weaknesses in email filtering and user awareness. Rapid detection and response limited the impact. Improvements are required in employee training, alert tuning, and response coordination. Implementing stronger preventive controls and continuous monitoring will enhance security posture and reduce the likelihood of similar incidents.
